

## NodeJS Test Task

### Technical requirements

- Create a Node js program.
- Feel free to use any library which will help you achieve the results.
- Use MySql as a database (write raw queries)
- Please don't modify the data input.
- Use git for version control.
- Document your assumptions in the code comments.

### How to submit

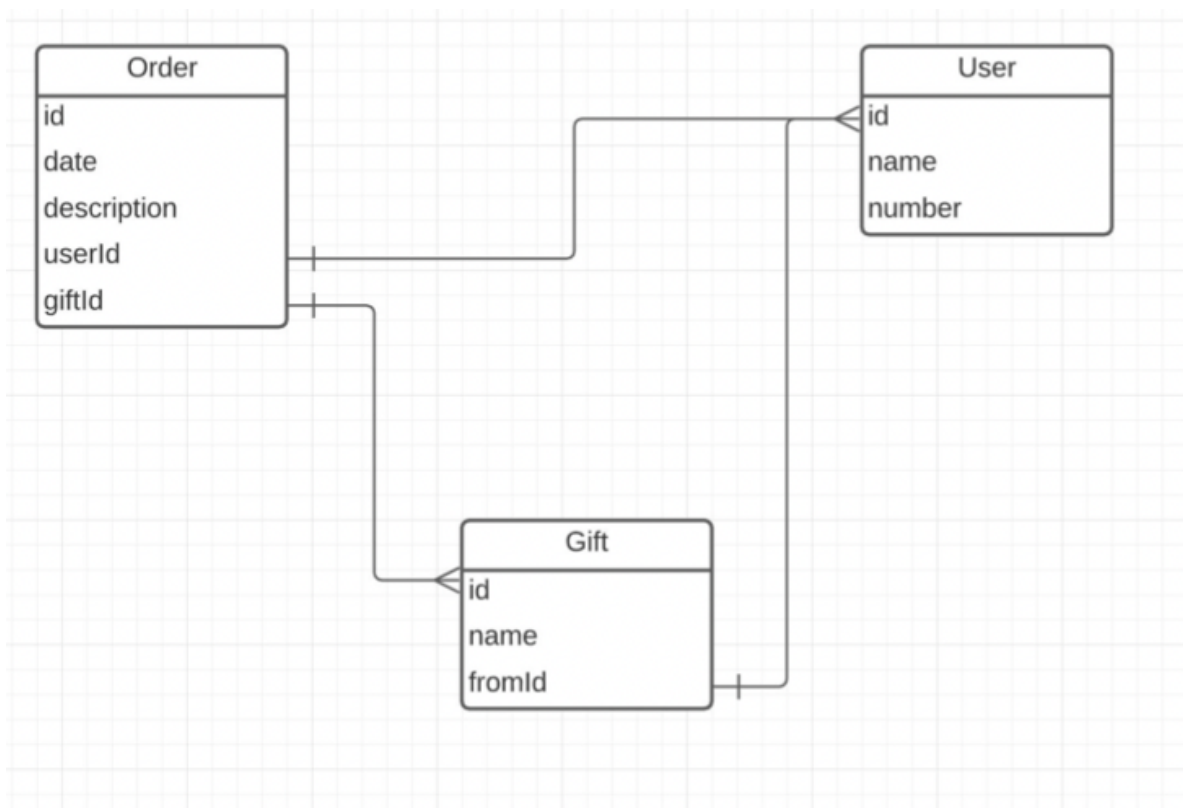

- Please use Bitbucket, Github, or similar tools to submit your work.
- Ask clarifying questions in a written form via email if necessary.

### Details

You should write a program that reads Orders history data from xlsx spreadsheet, parses it and inserts data to the database with relations present.

The database should have these 3 tables:

- Order
- User
- Gift

Good Luck!
